PRINTBASE TEXTILES

Printbase Textiles has been the leading distributor and manufacturer of digitally printable textiles on the African continent over the last 15 years.

Our entire product range is produced at our factory at 1 Cochrane Avenue, Epping 1, Cape Town by highly skilled technicians with many years of textile production expertise.

Printbase Textiles is the only vertically integrated textile mill that knits, coats and finishes from yarn to roll purely for the digital print industry.

Printbase Textiles offers an extensive range of fabrics in finishes suitable for Eco Solvent, Full Solvent, Latex, Dye Sublimation Paper Transfer, Dye Sublimation Direct and UV Cure printing options.

Printbase Textiles is a proudly South African company with level 4 B-BBEE certification.

WHY PRINTBASE WARP KNIT DIGITALLY PRINTABLE TEXTILES

Combining warp knitted fabrics produced on Karl Mayer knitting machines using high filament count polyester yarns with state of the art European finishing chemicals and process routes gives Printbase Textiles the edge when it comes to superior quality.

Printbase Textiles warp knitted fabrics do not fray during the cut, make and trim process (CMT) and remain pliable and malleable after printing making production turnaround times quicker for seamstresses.

Our warp knitted fabric and finish routes result in vibrant prints and minimize the chance of white cracking and ink abrasion after printing.

Unlike most imported fabrics every meter produced at Printbase Textiles is inspected and all faults are removed, minimizing the chance of print rejects.

Printbase Textiles warp knitted fabrics are the media of choice of selected European and USA based distributors of digitally printable fabrics.
